Nguyễn Đăng Thành

Mobile Developer

I build cross-platform and native mobile apps with Flutter, React Native, and Android (Kotlin) — from property management systems to fintech apps and banking SDKs for merchants and businesses.

Business Management SDK for Banking Super-Apps

An embeddable native Android SDK (.aar) integrated into banking apps, enabling merchants to manage sales, inventory, e-invoices and store revenue.

- Built core SDK entry points, SSO/session validation, payload encryption, deep linking and AAR release packaging for partner banking apps.
- Developed end-to-end inventory modules (stock import, supplier return, audit, batch tracking) alongside supplier and debt management.
- Implemented incoming e-invoice sync, PDF preview, payment and multi-step stock import flows, plus e-invoice package registration.
- Built store sharing via QR/OTP, balance-change voice alerts, customizable VietQR generation and role-based staff permissions.
- Created tax ledger views, custom revenue charts and reusable UI components while optimizing SDK bundle size.

Real Estate Management System

A cross-platform property management platform (mobile apps and web portals) covering buildings/rooms, deposits, contracts, utility billing, asset warehouses and staff operations.

- Built end-to-end warehouse and asset modules (import, export, transfer, inventory audit, supplier & asset categorization) alongside contract asset handover.
- Developed multi-assignee task workflows (forwarding, recurring tasks, live countdowns, inspection & rating) and operational reports, plus related web features.
- Implemented leasing and billing flows: deposits, contract lifecycle (extension, room transfer, liquidation, PDF preview), tenant meter readings and role-based permissions.
- Configured multi-brand Flutter flavors (Admin, Resident, Partner), FCM push notifications, localization (VI/EN/JA) and HMAC-signed bank Open API payment deep linking.
- Built shared list/filter UI components and improved performance via refactoring, Flutter/Kotlin upgrades, R8/ProGuard obfuscation and App Store / Google Play releases.

Flutter React Flavor Firebase REST API

Fintech & Business Management Platform

A multi-industry financial and POS app enabling merchants and enterprises to manage sales, inventory, cash flow, e-invoices, tax and reporting.

- Developed multi-industry POS, inventory and cash book modules across retail, F&B table ordering and pharmacy workflows.
- Built payment and banking flows including account linking, Open API deep linking, VietQR, soundbox alerts and receipt printing.
- Implemented e-invoice management, regulation-compliant tax declarations and visual business/financial reports with PDF and Excel export.
- Managed state and API sync with MobX, supporting multi-store switching, staff permissions, FCM notifications and partner-branded builds.
- Built reusable UI components and onboarding flows while optimizing app performance and Android/iOS release builds.

Citizen Service App (09–10/2024)

Helps citizens register and look up administrative procedures. I helped build document management with image and PDF upload on Android and iOS, plus search for procedures such as birth registration, temporary residence and marriage registration.

Flutter Firebase Provider

Insurance Contract Management App (10/2024 – 04/2025)

- Built the logic that shows questions to insurance buyers and adjusted the UI to customer requests.
- Built API calls and data processing.
- Distributed iOS builds via TestFlight and Android test builds via App Center for testers and QA.

Flutter Firebase BLoC Clean Architecture

Internal Real Estate App (10/2024 – 04/2025)

- Built shared functions for the company's app ecosystem: login, account info, switching accounts, settings, and a home page listing accessible sub-apps.
- Improved UI/UX performance and built common components.
- Built account transfer to employees and API handling.
