Nguyễn Đăng Thành

Mobile Developer

I build cross-platform and native mobile apps with Flutter, React Native, and Android (Kotlin) — from property management systems to fintech apps and banking SDKs for small businesses.

Business Management SDK for Banking Super-Apps

An embeddable native Android SDK (.aar) integrated into banking apps, enabling merchants to manage sales, inventory, e-invoices and store revenue.

- Built core SDK entry points, SSO/session validation, payload encryption, deep linking and AAR release packaging for partner banking apps.
- Developed end-to-end inventory modules (stock import, supplier return, audit, batch tracking) alongside supplier and debt management.
- Implemented incoming e-invoice sync, PDF preview, payment and multi-step stock import flows, plus e-invoice package registration.
- Built store sharing via QR/OTP, balance-change voice alerts, customizable VietQR generation and role-based staff permissions.
- Created tax ledger views, custom revenue charts and reusable UI components while optimizing SDK bundle size.

Real Estate Management System

A cross-platform property management system with mobile apps and web portals for contracts, invoices, apartments, assets and staff task assignment.

- Designed and built new modules, including inventory management and multi-user task assignment, mainly on Flutter mobile with support for related web features.
- Improved performance through optimization, refactoring and platform upgrades.
- Configured Flutter flavors for multiple app variants (Admin, Resident, Partner).
- Set up Firebase Cloud Messaging (FCM) for real-time push notifications across variants.
- Integrated bank Open APIs for secure payment deep linking to external banking apps.

`Flutter` `React` `Flavor` `Firebase`

React Native Developer · Heno Technology JSC

Fintech platform for small businesses

A financial and business management app where small businesses handle sales, inventory, cash flow, e-invoices and reporting in one place.

- Built and optimized complex UI components, improving performance and user experience.
- Implemented state management with MobX, handling complex data flows and cache sync with APIs.
- Built payment flows, including bank account selection and integration with external banking systems.
- Set up FCM push notifications and integrated bank Open APIs for payment deep linking.
- Enhanced core modules (Profit Reporting, Tax Declaration, Staff Management, Sales Management) with responsive UX and regulation-compliant tax logic.

Flutter Developer · FPT Information System

09/2024 – 04/2025

Citizen Service App (09-10/2024)

Helps citizens register and look up administrative procedures. I helped build document management with image and PDF upload on Android and iOS, plus search for procedures such as birth registration, temporary residence and marriage registration.

`Flutter` `Firebase` `Provider`

Insurance Contract Management App (10/2024 - 04/2025)

- Built the logic that shows questions to insurance buyers and adjusted the UI to customer requests.
- Built API calls and data processing.
- Distributed iOS builds via TestFlight and Android test builds via App Center for testers and QA.

`Flutter` `Firebase` `BLoC` `Clean Architecture`

Internal Real Estate App (10/2024 - 04/2025)

- Built shared functions for the company's app ecosystem: login, account info, switching accounts, settings, and a home page listing accessible sub-apps.
- Improved UI/UX performance and built common components.
- Built account transfer to employees and API handling.
